

An eDub Finds Freedom

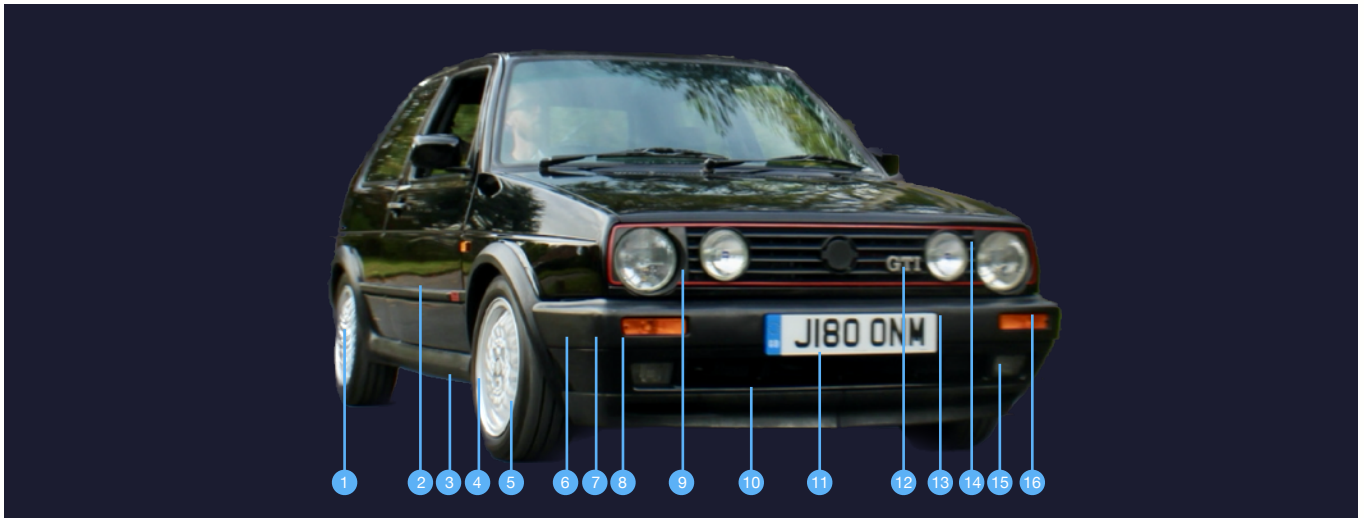

eDub Conversions
Electric Golf Mk2

At first glance this may seem like a standard Mk2 Golf and in many respects it is. The suspension, brakes, exterior, much of the interior and even the BBS rims will be familiar to past and present owners of a Mk2. Yet, the remainder of this innocent looking Golf couldn't be more different to any other of the multitude of Mk2s that rolled off the production line.

But under the sleek exterior hides a monster. A Tesla Model 3 Drive Unit gives up to 290BHP in an instant, with no wasting time depressing the clutch or shifting gears. This sporty little car is balanced perfectly helping you to hug tightly to the corners, even with so much power. An incredibly well thought through conversion throughout, remaining sympathetic to VW's original.

Superior Design

- 1 CCS Rapid Charging at 70kW
- 2 7kW Type 2 charging
- 3 Up to 290BHP Motor
- 4 Single Speed Reduction Gearbox
- 5 Regenerative Braking
